

# MOHAMMED MAHER BATIS

(+966) 053566941 | Saudi Arabia-Riyadh | [mohammed.batis.dev@gmail.com](mailto:mohammed.batis.dev@gmail.com) | [LinkedIn](#) | [GitHub](#)

Software Engineer experienced in managing the end-to-end development of scalable web applications. Progressed from an intern to a core team member at AQWAS, successfully delivering high-impact initiatives like the Discover Aseer national tourism portal. Proven ability to collaborate with cross-functional teams, translate complex business requirements into intuitive digital products, and leverage intelligent solutions to solve real-world challenges and elevate user experiences.

---

## EDUCATION

**Arab Open University | Saudi Arabia, Riyadh**

**May 2026**

**B.S. in Computer Science | GPA: 3.05/4.0**

Software Engineering, Operating Systems, Artificial Intelligence, Algorithms, Data Structures, ObjectOriented Programming, Data Management and Analysis,

---

## EXPERIENCE

**AQWAS | Software Engineer | Saudi Arabia, Riyadh**

**Feb 2026 – Present**

- Engineered the "AI Travel Planner" utilizing the Anthropic (Claude) API, delivering personalized, LLM-driven itineraries that optimize the tourist experience.
- Architected frontend integrations by mapping high-fidelity Figma designs (via HeroUI) directly to a headless CMS (Directus), ensuring seamless content delivery and dynamic data rendering.
- Lead ongoing production maintenance and scaling efforts; actively collaborating with cross-functional teams to troubleshoot complex system bugs, optimize web performance, and deploy new features.
- Developed an automated document generation platform using Next.js and the OpenAI API, streamlining administrative workflows for employees.
- Configured scalable backend infrastructure utilizing Firebase for real-time database management and secure user authentication.

---

## PROJECTS

**FeedAnalysis | AI-Powered Feedback Monitoring System | [Open Project](#)**

**Feb. 2026 – Mar. 2026**

- **Engineered a full-stack web application** leveraging Next.js and Firebase to automate the collection, storage, and analysis of customer reviews.
- **Integrated the Gemini API** as a real-time AI processing engine to perform sentiment classification, generate text summaries, and extract actionable business strengths and weaknesses.
- **Designed a secure administrative dashboard** utilizing Recharts and React Table to visualize KPIs and provide business insights through interactive, filterable data representations

**AI Recipe Assistant | Smart Culinary Web App | [Open Project](#)**

**Oct. 2025 – Nov. 2025**

- **Built a responsive frontend application** using React and Vite that dynamically generates customized recipes based on user-provided ingredients.
- **Integrated the Hugging Face Inference API** for AI-driven content generation, utilizing react-markdown to ensure clean, dynamic text rendering and formatting.

---

## TECHNICAL SKILLS

- Programming Languages: TypeScript, JavaScript, Python, Java
- Frontend & UI: React, Next.js, Tailwind CSS, HeroUI, HTML, CSS
- Backend & CMS: Firebase, Directus CMS
- AI Integration (APIs): OpenAI API, Anthropic (Claude) API, Gemini API, Hugging Face
- AI-Assisted Development & Tools: GitHub Copilot, AI-Driven IDEs (Antigravity), CLI Automation, Git/GitHub, Figma, Docker, CI-CD-Pipeline, GitHub Action
